

A TINY CHEATSHEET ON

docker

docker run [image]

Run a container from a docker image.

--name: specify container name

-p: specify port mappings

--hostname: specify hostname

docker stop [container]

Stop a docker [container]

docker pull [image]:[tag]

Pull an [image] with [tag] from Docker Hub

docker images

List all the images

docker push [image]:[tag]

Push [image] to repository

docker stats

Show stats of running containers

Docker is a tool designed to make it easier to create, deploy, and run applications by using **containers**.

docker ps

List all the running containers. Add the **-a** flag to list all the containers.

docker start [container]

Start a docker [container]

docker rm [container]

Delete a [container]. Add **-f** to delete a running container

docker rmi [image]

Delete an [image]

docker build

Build docker image from **Dockerfile**

docker logs [container]

Show logs of [container]

docker version

Show docker version
