A TINY CHEATSHEET ON

npm

npm is the default package manager for the **Node.js**

npm init
Create a new
npm project/package. Add the
-y flag to initialize with default
configuration

npm i [package]
Install a **[package]**.
Add **-D** flag to install as
devDependency
Add **-g** flag to install globally

npm rm [package]
Remove a **[package]**.
Add **-D** flag to remove a
devDependency
Add **-g** flag to remove globally

npm up [package]
Update a **[package]**.
Add **-g** flag to install globally

npm ls
List all the packages
Add the flags **-g --depth 0** to list
global packages

npm run [script]
Run the script
called **[script]** as mentioned
in *package.json*

npm install
Install all the packages
mentioned in *package.json* of
the current project

npm install -g npm
Update *npm* to the latest
version

npm audit
Scan and list all the
vulnerabilities in the project.
npm audit fix will fix the
vulnerabilities as well

npm docs [package]
Show *docs/readme* of
[package]

npm xmas
npm visnup
npm substack
Fun commands to try yourself!
